Caledonian College partners with French laboratory

MUSCAT: Caledonian College of Engineering is further developing its international collaboration by signing a formal document of cooperation with an important French national laboratory.

As a follow up to the visit of Dr Michel Torrijos, head of the Technology Transfer Group, National Institute of Agronomic Research, Laboratory of Environmental Biotechnology (INRA-LBE), France, the college is happy to announce that a formal memorandum of understanding is now on the agenda.

This agreement covers research collaboration, staff and student exchange, conduct of joint workshops and conferences. CCE recently held a meeting with Dahmane Houcine, Cultural Attaché, French embassy in Oman, who welcomed this joint collaboration and promised to extend all possible support for the success of this collaboration. Further to the research collaboration with INRA-LBE, possible academic collaboration for new programme development and training were discussed, in the areas of architecture, aviation and business management.

A visit to France by the college team is scheduled and they will visit several premier institutions in France, with the guidance and support of the French embassy. The college is also planning to add French language learning support to its Learning Resource Centre.

Dr Ahmed Al Balushi, acting dean at CCE, added that “we are very keen to establish different international relations to bring the best practices in the teaching, learning and research to Oman higher education private sector. We try to strengthen the quality of our own programmes and add value to our graduates’ qualifications.”
